The flood risk is VERY LOW for the next five days.

Assessment of flood risk

Rivers

The river flood risk is VERY LOW for the next five days.

Heavy and persistent rainfall is possible across parts of central and northern England throughout Saturday. This rainfall could lead to localised minor river flooding impacts. The likelihood of these impacts is assessed as very low as there are uncertainties in the position of heaviest rainfall.

Surface water

The surface water flood risk is VERY LOW for the next five days, despite the potential for heavy and persistent rainfall across parts of central and northern England throughout Saturday.

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days. The potential flooding impacts reduce to minimal through this morning as large waves along parts of the south-west and south coasts of England and Wales reduce.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

Flood Guidance Statement

10:30hrs Thursday 02 March 2017

Flood risk matrix

LIKELIHOOD	HIGH				
	MEDIUM				
	LOW				
	VERY LOW				
		MINIMAL	MINOR	SIGNIFICANT	SEVERE
IMPACT					
		VERY LOW	LOW	MEDIUM	HIGH
OVERALL FLOOD RISK					

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
