Assessment of flood risk

Surface water

The surface water flood risk is VERY LOW for the next five days.

Today, heavy rain has now eased across south-west England and Wales. As such minor surface water flood impacts are possible but not expected.

Minor surface water flood impacts are possible on Wednesday across south Wales due to further rain falling across wet catchments. See Area A on Specific Areas of Concern Map 1.

Rivers

The river flood risk is VERY LOW for the next five days.

Minor river flood impacts are possible on Wednesday in Area A on Specific Areas of Concern Map 1. This is due persistent rain falling on wet catchments and combining with some snow melt. Elsewhere on Tuesday and Wednesday rivers are likely to respond but any impacts will be minimal.

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days, despite the risk of gales and large waves at times.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

Flood Guidance Statement

10:30hrs Tuesday 13 February 2018

Flood risk matrix

LIKELIHOOD	HIGH				
	MEDIUM				
	LOW				
	VERY LOW				
		MINIMAL	MINOR	SIGNIFICANT	SEVERE
IMPACT					
		VERY LOW	LOW	MEDIUM	HIGH
OVERALL FLOOD RISK					

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
