Minor coastal flooding impacts are possible but not expected along parts of the south and south-west coast of England and parts of the coast of Wales on Thursday morning.

Assessment of flood risk

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Coastal gales and large waves on Thursday and at first on Friday may lead to localised instances of wave over-topping and wind blown spray over south and south-west coasts of England and the south-west and west coast of Wales. Minor coastal flooding impacts are possible but not expected.

Surface water

The surface water flood risk is VERY LOW for the next five days.

Localised heavy rain at times over the next five days may lead to localised surface water flooding, however any impacts are expected to be minimal.

Rivers

The river flood risk is VERY LOW for the next five days.

Successive periods of rain over the next five days will cause catchments to become increasingly wet and rivers to become increasingly responsive to further rain. However, any river flooding impacts are expected to be minimal.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

Flood Guidance Statement

10:30hrs Thursday 29 November 2018

Flood risk matrix

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
