Minor surface water and river flooding impacts are possible but not expected across parts of the south of England and Wales and in the north-east of England (surface water only) on Wednesday. The overall flood risk is VERY LOW.

Assessment of flood risk

Surface water

The surface water flood risk is VERY LOW for the next five days.

Localised minor surface water flooding impacts are possible but not expected in the following places on Wednesday: Parts of the south and east of England, the south-east of Wales and the north-east of England.

This is due to a period of prolonged rain followed by heavy showers, with urban areas most prone to seeing any impacts.

Rivers

The river flood risk is VERY LOW for the next five days.

Isolated minor river flooding impacts are possible but not expected in parts of the south and east of England and the south-east of Wales on Wednesday, if heavy rain or showers affect fast responding urban catchments.

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

Flood risk matrix

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
