Steady

Minor coastal flooding impacts are possible but not expected on Sunday afternoon for some coastal areas in the north-east of England and Yorkshire. The overall flood risk is VERY LOW.

Assessment of flood risk

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Minor coastal flooding impacts are possible but not expected for some coastal areas in the north-east of England and Yorkshire around the time of high tide this (Sunday) afternoon. This is due to the combination of spring tides, surge and large waves.

Otherwise, although tide levels will remain fairly high down the east coast of England until Monday, no more than minimal impacts are expected.

Surface water

The surface water flood risk is VERY LOW for the next five days despite the possibility of a few heavy showers for the west Midlands, east Wales and parts of SW England this afternoon and the potential for some heavy rain and showers during Wednesday and Thursday.

Rivers

The river flood risk is VERY LOW for the next five days despite the potential for some heavy rain during Wednesday and Thursday.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

Flood risk matrix

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
