The overall flood risk is VERY LOW for the next five days. See end of FGS for 6-10 day forecast.

Assessment of flood risk

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Some minimal impacts are expected given the potential for localised spray and wave overtopping for parts of the Yorkshire coastline today (Saturday) due to strong winds and large waves.

Surface water

The surface water flood risk is VERY LOW for the next five days.

Rivers

The river water flood risk is VERY LOW for the next five days.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.

6-10 day forecast

It is expected to turn increasingly unsettled from the beginning of October. This brings the possibility of heightened flood risk for England and Wales.

Flood risk matrix

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
