The overall flood risk for England and Wales for the next five days is VERY LOW.

## Assessment of flood risk

### Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days. Astronomical tides will be large from Tuesday until Thursday with isolated instances of wave-overtopping possible along the Yorkshire coast, however no more than minimal impacts are expected.

### Groundwater

The groundwater flood risk is VERY LOW for the next five days, although levels are high in Kent and parts of the south and east of England.

### Surface water

The surface water flood risk is VERY LOW for the next five days. Locally heavy showers at times are unlikely to lead to more than minimal surface water impacts.

### Rivers

The river flood risk is VERY LOW for the next five days.

### Flood risk matrix

### Summary of potential impacts

**MINIMAL**

Isolated and minor flooding of low-lying land and roads  
Isolated spray/wave on coastal promenades  
Little or no disruption to travel, but wet road surfaces

**MINOR**

Localised flooding of land and roads  
Flooding affecting individual properties  
Disruption to travel and key sites in flood plans

**SIGNIFICANT**

Flooding affecting parts of communities  
Possible danger to life and damage to buildings/structures  
Disruption to travel and key sites in flood plans

**SEVERE**

Danger to life, severe disruption to travel  
Widespread flooding affecting whole communities  
Widespread disruption or loss of infrastructure  
Large scale evacuation of properties possible
