Steady

The overall flood risk for England and Wales for the next five days is VERY LOW.

Assessment of flood risk

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days. This is despite coastal gales and large waves for west and south coasts of England and Wales from Monday into Tuesday and the north-east coast of England on Tuesday.

Surface water

The surface water flood risk is VERY LOW for the next five days. Heavy and prolonged rain on Monday into Tuesday may lead to localised surface water flooding in urban areas but any impacts are expected to be minimal.

Rivers

The river flood risk is VERY LOW for the next five days, despite the potential for widespread rain on Monday into Tuesday.

Groundwater

The groundwater flood risk is VERY LOW for the next five days, although levels are high in Kent and parts of the south and east of England.

Flood risk matrix

Summary of potential impacts

MINIMAL

Isolated and minor flooding of low-lying land and roads
Isolated spray/wave on coastal promenades
Little or no disruption to travel, but wet road surfaces

MINOR

Localised flooding of land and roads
Flooding affecting individual properties
Disruption to travel and key sites in flood plans

SIGNIFICANT

Flooding affecting parts of communities
Possible danger to life and damage to buildings/structures
Disruption to travel and key sites in flood plans

SEVERE

Danger to life, severe disruption to travel
Widespread flooding affecting whole communities
Widespread disruption or loss of infrastructure
Large scale evacuation of properties possible
