Minor inland flood impacts are possible but not expected for parts of central and southern England on Sunday. The overall flood risk is VERY LOW for the next five days.

## Assessment of flood risk

### Surface water

The surface water flood risk is VERY LOW for the next five days.

Localised minor surface water flooding is possible but not expected in parts of central and southern England on Sunday, in response to locally heavy and perhaps thundery showers. Urban areas are most prone.

### Rivers

The river flood risk is VERY LOW for the next five days.

Localised minor flooding of small, urban and fast responding water courses is possible but not expected in parts of central and southern England on Sunday. This is due to locally heavy and perhaps thundery showers.

### Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Large tides will result in operational activity along some coastlines today (Thursday) and tomorrow (Friday) but any flood impacts are expected to be minimal.

### Groundwater

The groundwater flood risk is VERY LOW for the next five days.

### Flood risk matrix

### Summary of potential impacts

#### MINIMAL

Isolated and minor flooding of low-lying land and roads  
Isolated spray/wave on coastal promenades  
Little or no disruption to travel, but wet road surfaces

#### MINOR

Localised flooding of land and roads  
Flooding affecting individual properties  
Disruption to travel and key sites in flood plans

#### SIGNIFICANT

Flooding affecting parts of communities  
Possible danger to life and damage to buildings/structures  
Disruption to travel and key sites in flood plans

#### SEVERE

Danger to life, severe disruption to travel  
Widespread flooding affecting whole communities  
Widespread disruption or loss of infrastructure  
Large scale evacuation of properties possible
