Assessment of flood risk

Rivers

The river flood risk is MEDIUM.

Significant river flooding impacts continue for parts of the Midlands until Friday, with minor impacts continuing in parts of the Midlands and the North East of England until Wednesday. This is following recent heavy rain. See Specific Areas of Concern Maps.

Significant river flooding is also possible but not expected in parts of England on Tuesday and Wednesday, with minor impacts possible more widely, due to further heavy rainfall falling on sensitive catchments. See Specific Areas of Concern Maps.

Surface water

The surface water flood risk is LOW on Tuesday.

Significant surface water flooding is possible but not expected in parts of England on Tuesday, with minor impacts possible more widely, due to heavy rain falling on sensitive catchments. See Specific Areas of Concern Map.

Minor impacts from surface water flooding are also probable across parts of South West Wales and possible across South West England during today (Monday), due to heavy showers. See Specific Areas of Concern Map.

Impacts could include localised flooding from urban and fast responding smaller watercourses/catchments, drains, channels and flooding from overland flow.

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

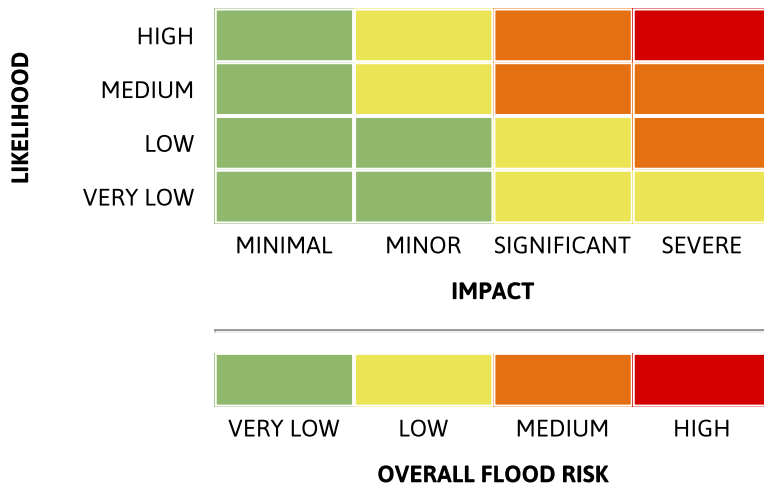

Groundwater

The groundwater flood risk is VERY LOW for the next five days.
