Minor surface water impacts are possible but not expected for parts of Wales on Friday. The overall flood risk for England and Wales is VERY LOW for the next five days.

Assessment of flood risk

Surface water

The surface water flood risk is VERY LOW for the next five days.

Minor surface water impacts are possible but not expected for parts of Wales on Friday. This is due to rain, heavy at times, becoming slow moving across the area.

Impacts could include localised flooding from urban and fast responding smaller watercourses/catchments, drains, channels and flooding from overland flow.

Coastal/Tidal

The coastal/tidal flood risk is VERY LOW for the next five days.

Minimal coastal impacts are expected along some Welsh and English coasts through today (Wednesday), and along some English coasts on Thursday, due to high tides, storm surge and possible large waves. Impacts may include isolated spray on low-lying roads and coastal promenades.

Rivers

The river flood risk is VERY LOW for the next five days.

Groundwater

The groundwater flood risk is VERY LOW for the next five days.
